3 # This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
4 #
5 # This file contains the mappings of IP addresses to host names. Each
6 # entry should be kept on an individual line. The IP address should
7 # be placed in the first column followed by the corresponding host name.
8 # The IP address and the host name should be separated by at least one
9 # space.
10 #
11 # Additionally, comments (such as these) may be inserted on individual
12 # lines or following the machine name denoted by a '#' symbol.
13 #
14 # For example:
15 #
16 #       102.54.94.97       rhino.acme.com       # source server
17 #       38.25.63.10       x.acme.com           # x client host
18
19 # localhost name resolution is handled within DNS itself.
20 # 127.0.0.1       localhost
21 # ::1            localhost
22
23 # CAR PARADISE DANI

- El código fuente es descargable de un repositorio GIT como se pide, dicho proyecto [landingPage] se vuelca donde apunte el servidor, por defecto en la ruta "www" de WampServer, aunque es posible configurar uno o varios alias y activarlo con el propio WampServer.
- Ejecutar el acceso directo llamado **"Promoción - landingPage - Dapda - Daniel Pancorbo Miranda.lnk"** con un navegador a conveni, por ejemplo Google Chromer. Nota: es la ruta **"http://localhost/landingPage/index.php/promocion"**.
